Advice No. 4131
(U 904 G)

Public Utilities Commission of the State of California

Subject: Second Biennial Report on Backbone Transmission and Slack Capacity in Compliance with Decision (D.) 06-09-039

Southern California Gas Company (SoCalGas) hereby submits for filing its second biennial report to demonstrate that it holds adequate backbone transmission capacity and has slack capacity consistent with its proposals in the Gas Market Rulemaking (R.04-01-025).

Purpose

This Advice Letter complies with Ordering Paragraph (OP) 3 of D.06-09-039 which states:

3. The Pacific Gas and Electric Company and the Southern California Gas Company shall demonstrate in biennial advice letter filings to the Commission's Energy Division starting 2008 that they hold adequate backbone transmission capacity and have slack capacity consistent with their proposals presented herein. The first filing is due July 1, 2008.

Background

In response to reports and ongoing changes in the natural gas market which indicated that there may not be sufficient natural gas supplies or infrastructure to meet the long-term needs of the state's residential and business customers, the Commission initiated R.04-01-025. In the Assigned Commissioner's Scoping Memo of February 28, 2005, the Commission identified the following question for consideration in Phase 2 of this proceeding.¹

Can the California gas utilities' existing infrastructure and operations adequately protect California from short-term or long-term natural gas shortages caused by the interruptions in natural gas supply?

¹ Phase 1 of this proceeding was limited to issues related to the utilities' acquisition of interstate capacity and was resolved in D.04-09-022.

Most of the natural gas transported via the interstate pipelines, as well as some of the California produced natural gas, is delivered into PG&E and SoCalGas intrastate natural gas transmission pipeline systems (commonly referred to as California's "backbone" natural gas pipeline system). Natural gas on the utilities' backbone pipeline systems is then delivered into the local transmission and distribution pipeline systems, or natural gas storage fields.

In D.06-09-039, the Commission determined that it was, "comfortable with the total amount of firm backbone transmission capacity on both the PG&E and SoCalGas systems."² In an effort to continue to monitor the sufficient level of backbone capacity on the PG&E and SoCalGas systems, the Commission also required PG&E and SoCalGas to demonstrate in advice letter filings with the Commission's Energy Division that they hold adequate backbone transmission capacity. These advice letter filings shall be made on a biennial basis, beginning July 1, 2008.³

Information

In R.04-01-025, SoCalGas presented to the Commission that it held a 49% annual reserve margin at the time and that, historically, its reserve margins have been between 40%-50%.⁴ Table 1 below illustrates that SoCalGas expects to hold a Reserve Margin of 45% in 2010 and to retain an average Reserve Margin of 47% through 2030.

Table 1⁵
SoCalGas Reserve Margin
One- in-Ten-Year Cold and Dry-Hydroelectric Condition

Year	Annual Average Daily Demand (MMCFD)	Reserve Margin
2010	2,676	45%
2011	2,613	48%
2012	2,685	44%
2013	2,680	45%
2014	2,675	45%
2015	2,667	45%
2016	2,673	45%
2017	2,653	46%
2018	2,648	46%
2019	2,637	47%
2020	2,626	48%
2025	2,592	49%
2030	2,601	49%

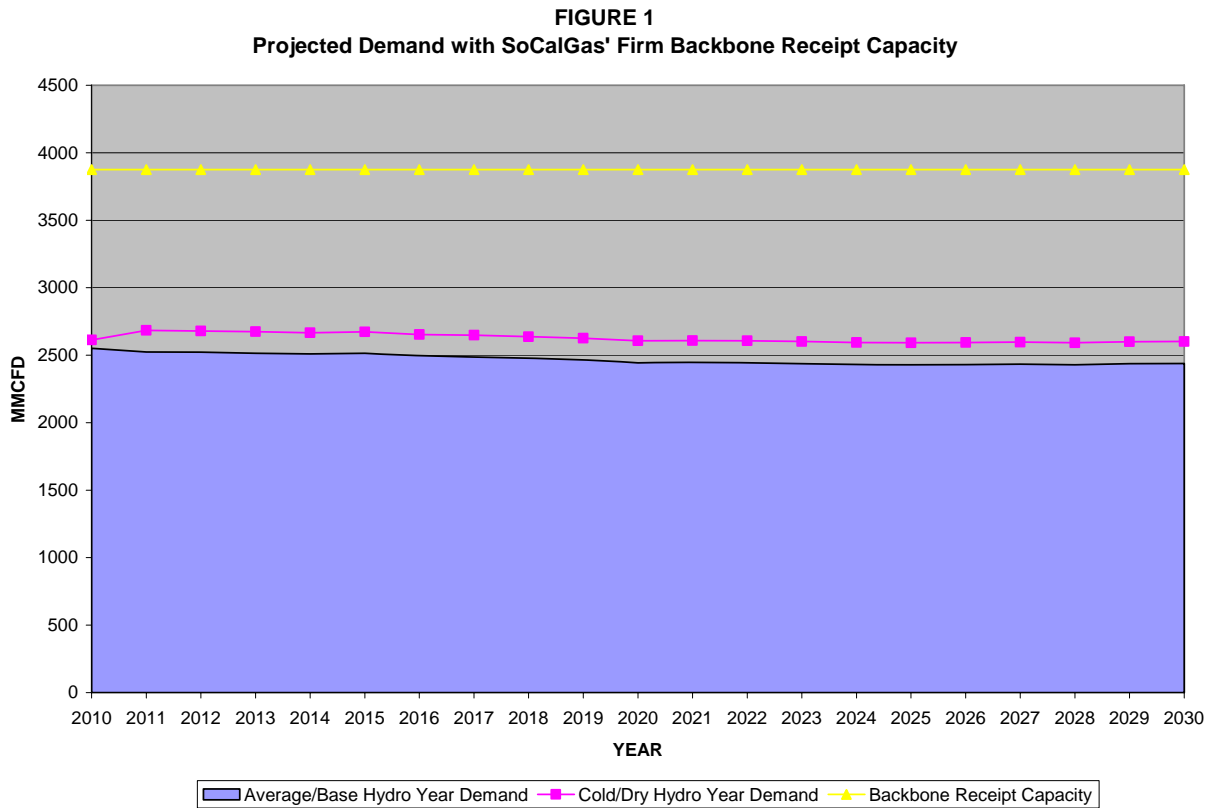

² D.06-09-039, Finding of Fact 12

³ D.06-09-039, page 27.

⁴ D.06-09-039, FOF 8. The Reserve Margin of backbone capacity in excess of demand on the SoCalGas system is derived by the formula: Reserve Margin = (Firm Daily Receipt Capacity – Average Daily Demand)/ Average Daily Demand.

⁵ Demand source: 2010 California Gas Report data. Reserve margin relative to existing SoCalGas receipt capacity of 3,875 MMcf

Figure 1 below further illustrates that SoCalGas continues to hold adequate backbone transmission capacity.

Therefore, SoCalGas confirms that it holds adequate backbone transmission capacity and has a reserve margin on backbone capacity consistent with Commission Order.
