Advice Letter 4725

Rasha Prince, Director Regulatory Affairs Southern California Gas 555 W. Fifth Street, GT14D6 Los Angeles, CA 90013-1011

Subject: SoCalGas' 2015 Energy Efficiency Program Portfolio

Dear Ms. Prince:

Advice Letter 4725 is effective January 14, 2015.

Sincerely,

Edward Randolph

Director, Energy Division

Edward Ramloft

Rasha Prince Director Regulatory Affairs

555 W. Fifth Street, GT14D6 Los Angeles, CA 90013-1011 Tel: 213.244.5141 Fax: 213.244.4957 RPrince@semprautilities.com

December 15, 2014

Advice No. 4725 (U 904 G)

Public Utilities Commission of the State of California

Subject: SoCalGas' 2015 Energy Efficiency Program Portfolio

Southern California Gas Company (SoCalGas) hereby submits for approval by the California Public Utilities Commission (Commission) its 2015 Energy Efficiency (EE) Program Portfolio. This final EE Program Portfolio, along with all necessary supporting documentation, is incorporated herein as Appendices A through E.

Purpose

This filing is in compliance with Ordering Paragraph (OP) 16 of Decision (D.) 14-10-046 which directs program administrators to file a Tier 2 Advice Letter for approval of the 2015 EE Program Portfolio plans within 60 days from the date of D.14-10-046.

SoCalGas also requests approval to eliminate the existing EE third party program, SCG3766-SaveGas Program, from its EE Program Portfolio, as described below in the section titled "SaveGas Program Closure".

Background

On March 26, 2014, SoCalGas submitted for approval by the Commission a request for funding of Energy Efficiency Programs and Budgets for 2015 (2015 Funding Request). On October 24, 2014, the Commission issued D.14-10-046, which approved EE program plans and budgets for 2015 for SoCalGas, San Diego Gas & Electric (SDG&E), Southern California Edison (SCE), and Pacific Gas & Electric (PG&E). D.14-10-046 addresses: (1) the determination of 2015 as the third year of the 2013-2015 program cycle; (2) the development of a base funding approach for EE programs at 2015 levels until 2025, unless superseded by a Commission decision; (3) the energy saving goals that must be achieved in 2015; (4) the budgets authorized to achieve the energy savings goals and the cost-effectiveness finding that is required; (5) the

programs authorized to produce these savings; and (6) the evaluation, measurement, and verification (EM&V) procedures used to ensure projected savings actually occur.

As required in D.14-10-046, this filing contains all of the requested details, including the following: (1) recalculated Total Resource Cost (TRC) and Program Administrator Cost (PAC) tests that exceed a 1.0 threshold for 2015; (2) incorporation of reductions and/or increases in program or sector budgets; (3) all files contained in Appendices A, B, C, and D of the 2015 funding proposals that reflect budget and programmatic changes; and (4) incorporation of measure level input corrections identified by Commission Staff. The following appendices meet the requirements of D.14-10-046:

- Appendix A: Budget Request Filing Summary Tables
- Appendix B: Budget and Savings Placemat Tables
- Appendix C: Savings Allocation and Funding Sources Tables
- Appendix D: Cost-Effectiveness E3 Calculators

These appendices will be made available on http://www.socalgas.com/regulatory/R13-11-005.shtml. Appendix D, attached herein, provides only a summary of SoCalGas' total portfolio cost-effectiveness E3 Calculator. The complete version of Appendix D can be found on the above noted website.

Compliance Items

The following are compliance requirements not addressed in Appendices A – D:

Program Funding Levels

Figure 7 of D.14-10-046 lists the authorized SoCalGas budgets by program area. Table 1 below shows the authorized budgets included in Figure 7, along with the budget levels submitted herein for program implementation.

SoCalGas' 2015 program budget request approved in D.14-10-046, does not include the 2015 program budget for the SoCalGas Statewide Marketing, Education & Outreach (ME&O) program nor the 2015 program budget for the Statewide Financing Pilots. The budgets for these programs were approved in D.13-12-038 and D.13-09-044, respectively.

The Southern California Regional Energy Network (SoCalREN) is submitting its own Advice Letter (AL) to implement its programs and associated budget. The information regarding the SoCalREN shown herein reflects information provided by that organization to SoCalGas on December 9, 2014, which matches the authorized budget level in D.14-10-046.¹

¹ SoCalGas requests that the SoCalREN Advice Letter should be used as the source of information to reflect the SoCalREN 2015 energy efficiency portfolio / compliance filing.

Table 1: 2015 EE Portfolio Budgets

Program Area	<u>Tot</u>	al Funds
Residential	\$	19,579
Commercial	\$	10,737
Industrial	\$	11,173
Agricultural	\$	4,239
Codes and Standards	\$	843
Financing	\$	2,264
Subtotal Statewide Resource Programs	\$	48,835
Third Party Programs	\$	16,376
State and Local Government Partnerships	\$	4,846
Subtotal Other Resource Programs	\$	21,222
Emerging Technologies	\$	1,272
Workforce, Education, and Training	\$	3,129
Marketing, Education, and Outreach		N/A
Integrated Demand Side Management	\$	582
Other	\$	978

Evaluation, Measurement, and Verification Grand Total	**************************************	3,348 83,703
Orana rotar	Ψ	00,100

Notes:

- 1. Minor differences exist by program area due to rounding.
- 2. Does not include SW ME&O program funds authorized in D.13-13-028.
- 3. Does not include SW Financing Pilots program funds authorized in D.13-09-044.

Additional program level budget detail is provided in Appendix B.

<u>SoCalGas Portfolio Energy Savings Goals, Cost-Effectiveness, and Budget Caps/Targets</u>

SoCalGas provides its energy savings goals, portfolio cost-effectiveness (Table 2) and budget caps and targets (Table 3) below:

Table 2: 2015 EE Portfolio Energy Savings Goals and Cost-Effectiveness

	Goal	Cost-Effe	ctiveness
	(Therms)	TRC	PAC
Compliance Filing Targets	30,487,860	1.27	1.97
D.14-10-046 Goals	25,300,000	1.00	1.00
% Forecast of Goal	121%		

The SoCalGas TRC and PAC results reflect the inclusion of the following inputs:

- A 5% market effects adjustment applied to the portfolio as directed by D.12-11-015, OP 37.
- General Rate Case (GRC) loaders associated with the EE program labor as directed by D.12-11-015, OP 39.²
- A projected shareholder incentive amount associated with the approved portfolio budget and projected therm savings activity. This assumption conforms to the methodology adopted in the Efficiency Savings and Performance Incentive (ESPI) Mechanism in D.13-09-023.

Table 3: 2015 EE Portfolio Budget and Budget Caps/Targets

	Budgets								
	Admin	Marketing	Direct	Incentives	EM&V	Total Budget			
2015 EE Budget	\$ 7,648,777	\$ 4,677,863	\$ 32,409,769	\$ 31,282,164	\$ 3,347,927	\$ 79,366,499			
GRC Labor Loaders	\$ 5,188,178	\$ 119,345	\$ 1,114,277			\$ 6,421,800			
New Financing Pilots	\$ 637,254	\$ 682,280	\$ 1,597,076	\$ 2,217,201		\$ 5,133,811			
OBF Loan Pool						\$ -			
Statewide ME&O		\$ 2,002,034				\$ 2,002,034			
Total EE Funding						\$ 92,924,144			
SoCaIREN						\$ 4,337,000			
Total EE Funding w/ SoCalREN						\$ 97,261,144			
Parameter Type	Сар	Target	Target	Target	Budget				
Cap / Target Level	\$ 8,877,091	\$ 5,456,929	\$ 19,917,498	\$ 33,499,365	\$ 3,347,927				
Total Budget for Calculation	\$ 92,924,144	\$ 92,924,144	\$ 92,924,144	\$ 92,924,144	\$83,702,927				
Cap / Target Percent	9.6%	5.9%	21.4%	36.1%	4.0%				
Caps/Targets	10.0%	6.0%	20.0%	60.0%	4.0%				

Pursuant to D.09-09-047, OP 13, the Commission determined that administrative costs are limited to 10% of the total energy efficiency budget, and ME&O costs have a budget target of 6% of the adopted portfolio budget. Additionally, non-incentive direct implementation costs have a budget target of 20% of the total budget, and EM&V funding is set at 4% of the authorized budget level. SoCalGas has calculated its

_

² On January 11, 2012, Energy Division conveyed ALJ Fitch's direction that the GRC costs are to be included in calculating the prospective portfolio budget administration cap.

portfolio caps and targets associated with its 2015 portfolio, presented in Table 3 above. SoCalGas notes the following assumptions:

- Funding for the SoCalGas On-Bill Financing Program loan pool recovered in gas transportation rates is included, but does not impact the calculations because the adopted level for 2015 is zero.
- Pursuant to D.13-12-038, the Statewide ME&O program costs are excluded from the marketing budget target.
- According to the direction contained in PG&E's AL 3356-G/4176-E³, SoCalGas excluded those program costs identified by Energy Division to be exempt from the cap and target calculation.
- D.14-10-046, as corrected by D.15-01-002, adopted a SoCalGas EM&V budget of \$3,347,927, which is 4% of the total budget.

SoCalGas will continue to report the status of its budget caps and targets based on actual expenditures in its quarterly reports submitted through the Commission's California Energy Efficiency Statistics (EEStats) website.

Measure Level Input Corrections

Advice No. 4725

On November 3, 2014, Commission Staff released a list of requested measure level input parameter corrections for each program administrator compliance filing.⁴ For SoCalGas, the list included 39 line item corrections.

SoCalGas has implemented all items identified for correction by Commission Staff in this AL, with the exception of the net to gross (NTG) ratio adjustment to the SCG3765 – Manufactured Mobile Homes Program. Commission Staff identified that the duct test and seal measures should receive an NTG ratio of 78% and water measures should receive a NTG ratio of 55%, compared to the NTG ratio of 85% utilized by SoCalGas. After conferring with Commission Staff on November 6, 2014, SoCalGas believes that the proper NTG ratio of 85% should be used. According to the Commission-adopted Database for Energy-Efficient Resources (DEER), the NTG ratio for direct install measures for hard-to-reach customers is 85%. The SoCalGas program provides nocost, direct install energy efficient measures to mobile home customers, which are defined as hard-to-reach, according to the EE Policy Manual. As a result, SoCalGas believes that the originally-utilized NTG ratio of 85% is appropriate.

Competitively Bid Portfolio Programs to Third-Party Vendors

SoCalGas' proposed budget above also includes \$17.3 million for competitively bid third-party implemented programs, which includes local third party programs as well as

-

³ AL 3356-G/4176-E, dated September 5, 2013, requested approval to implement PG&E's 2013-2014 Energy Efficiency Portfolio pursuant to D.12-11-015.

⁴ Required Corrections to Measure Level Input Parameters Identified by Commission Staff per D.14-10-046 OP 16.

⁵ Energy Efficiency Policy Manual, Version 5, at p. 54.

third parties who implement SoCalGas' statewide programs. This constitutes 22% of the SoCalGas' total portfolio budget, which exceeds the Commission's 20% requirement for competitively bid programs.

SaveGas Program Closure

SoCalGas seeks to eliminate the EE third party SCG3766 – SaveGas Program from its EE Program Portfolio. Pursuant to D.09-09-047, the Commission requires that no program or sub-program shall be eliminated except through the advice letter process. SoCalGas has implemented the SaveGas Program since the 2006-2008 program cycle. The program has been implemented by a third-party vendor that was selected through the Designed for Energy Efficiency Program (DEEP) third-party program bidding process which was overseen by the SoCalGas Peer Review Group for new program solicitations.

The program is designed to encourage hotels, motels, and senior living facilities to install boiler controls with continuous commissioning capability on central hot water systems that serve rooms as well as kitchen and laundry facilities. In a program meeting held in the third quarter of 2014, SoCalGas and the third-party implementer expressed concern that the hotel/lodging market has become saturated by the successful penetration of the program since 2006. Due to the limited remaining opportunities in the market, the third-party implementer formally requested to close the program at the end of 2014.

In SoCalGas' 2015 Funding Request, the utility requested a budget of \$524,554 for the SaveGas Program with projected therm savings of 195,721.

SoCalGas requests that the 2015 budget, as well as any remaining unspent, uncommitted funds from the 2013-2014 program, be shifted to SCG3771 – Innovative Design for Energy Efficiency Activities (IDEEA365). Through the IDEEA365 solicitation process, SoCalGas proposes to utilize the shifted funds to conduct a targeted solicitation in order to procure a comprehensive program approach that can serve the same market segment. In order to maintain product availability and a presence in the market, SoCalGas has added central hot water system control measures to its SCG3710 Commercial Energy Efficiency Calculated Incentives Program.

For additional information on the program, attached is the 2013-2014 SaveGas Program Implementation Plan as Appendix E. The current program progress is available as part of SoCalGas' regulatory reporting available on http://eestats.cpuc.ca.gov/.

Following approval of this Advice Letter, SoCalGas would initiate program closure procedures.

Protest

Anyone may protest this Advice Letter to the Commission. The protest must state the grounds upon which it is based, including such items as financial and service impact, and should be submitted expeditiously. The protest must be made in writing and must be received within 20 days of the date of this Advice Letter which is January 5, 2015. There is no restriction on who may file a protest. The address for mailing or delivering a protest to the Commission is:

CPUC Energy Division Attention: Tariff Unit 505 Van Ness Avenue San Francisco, CA 94102

Copies of the protest should also be sent via e-mail to the attention of the Energy Division Tariff Unit (<u>EDTariffUnit@cpuc.ca.gov</u>). A copy of the protest should also be sent via both e-mail <u>and</u> facsimile to the address shown below on the same date it is mailed or delivered to the Commission.

Attn: Sid Newsom
Tariff Manager - GT14D6
555 West Fifth Street
Los Angeles, CA 90013-1011
Facsimile No. (213) 244-4957

E-mail: snewsom@SempraUtilities.com

Effective Date

SoCalGas believes that this filing is subject to Energy Division disposition and should be classified as Tier 2 (effective after staff approval) pursuant to OP16 of D.14-10-046 and GO 96-B. SoCalGas respectfully requests that this filing be approved on January 14, 2015, which is 30 calendar days from the date filed.

Notice

A copy of this advice letter is being sent to SoCalGas' GO 96-B service list and the Commission's service list in R.13-11-005. Address change requests to the GO 96-B should be directed by electronic mail to tariffs@socalgas.com or call 213-244-3387. For changes to all other service lists, please contact the Commission's Process Office at 415-703-2021 or by electronic mail at process_office@cpuc.ca.gov.

Codes and Standards Advocacy		0.1	0.9	4.0				
Total Gas Targets	30.2	24.1	23.2	25.3				

^{[1] 2010-12} Annualized is the sum of the adopted CPUC goals in D.09-09-047 for the three years divided by three including Codes and Standards.

^{[2] 2013} and 2014 are IOU savings targets approved in Table 5 of D.12-11-015.

^{[3] 2015} Goals are approved in Figure 1 of D.14-10-046.

Table 2. Total 2015 Requested and 2010-2014 Authorized Budgets (\$000).

^[1] Authorized means the total authorized budget for the program cycle for programs irrespective of the source of funds as either from past unspent or new collections. Spent means actual funds expensed, including accruals, for activities completed during the period.

^{[2] 2013} spent means funds expensed for program activities occurring through 12/31/13.

^[3] Carryover spent means actual funds expended from funds of a previous cycle carried over as committed/obligated.

^[4] SoCalREN 2013 spend based on SoCalGas paid invoices.

^[5] These budgets are as established in D.13-04-021 and D.13-12-038 covering the 2013-2015 period; no new budget requested in this filing.

2013 Unspent - estimated available for 2015 ⁴	\$	-	\$	-	\$ -

^[1] Actual spent means funds expensed, including accruals, for program activities occurring from 1/1/13 through 12/31/13.

^{[2] 2013} committed and/or encumbered funds means funds that are associated with individual customer projects and/or contained within contracts or purchase order for authorized activities after 12/31/2013.

^[3] Value shown does not reflect all SoCalGas commitments; among those are SW ME&O, New Financing Pilots, and joint projects with other utilities.

^[4] Does not include spending/unspent funds associated with SoCalREN.

^{[5] 2013} unspent - available for 2015 are total unspent uncommitted funds and not planned for use in 2014.

^[6] Table 5 is consistent with 2015 budget filing of March 26, 2014.

CPUC 2015 Goal (includ	ing C&S)			-		-		25.3	

^[1] The total resource program budget by market sector is the sum of all administrative, marketing and direct implementation incentive and non-incentive costs included in the 2015 budget request. Resource cross cutting core and third party programs are allocated to the appropriate market sector where energy savings are expected to be realized.

[2] SoCalGas' Local Government and Institutional Partnership programs are non-resource programs and are not included above. Projects and savings are funneled through SoCalGas' core programs.

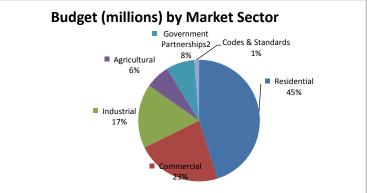

Table 2.1 -Bill Payer Impacts - Rates by Customer Class

	Electric Average Rate (Res and Non-Res) \$/kwh	Gas Average Rate (Res and Non-Res) \$/therm[1]	Total Average Bill Savings by Year[2,3]	Total Average Lifecycle Bill Savings[3,4]		
2013 [5]	-	\$ 0.85	\$ 16,557,808	\$ 211,228,578		
2014 [5]	-	\$ 0.85	\$ 15,113,124	\$ 229,142,453		
2015	\$ -	\$ 1.16	\$ 27,861,452	\$ 418,220,130		

^[1] As of July 1, 2014, SCG's residential gas class-average rate is \$0.66285 per therm. SCG's 12-month average procurement rate is 2014 was \$0.49548 per therm.

^[2] Average first year gas bill savings is calculated by multiplying an average gas rate with first year gross therm energy saving

^[3] Total Average Bill Savings by Year and Lifecycle Bill Savings include C&S lifecycle savings and exclude ESA Programs.

^[4] Average lifecycle gas bill savings is calculated by multiplying an average gas rate with lifecycle gross therm energy saving

^[5] Forecasted savings for 2013-2014 are taken from SoCalGas 2013-2014 Compliance Filing filed on January 14, 2013.

Advice No. 4725

SaveGas Program Implementation Plan

1. Program Name: SaveGas Hot Water Control with Continuous Commissioning

Program ID: SCG3766

Program Type: Third-Party Program

2. Projected Program Budget Table

Table 1: Total Projected Program Budget by Category

Program #	Main/Sub Program Name	Administrative Amount	Marketing Amount	Direct Implementation Amount	Incentive Amount	Total Program Budget Amount
	SoCalGas Third Party Programs					
3766	3P-SaveGas	\$0	\$0	\$594,168	\$385,833	\$980,001
3766u	3P-SaveGas (Utility)	\$17,806	\$7,661	\$41,864	\$0	\$67,331
	TOTAL:	\$17,806	\$7,661	\$636,032	\$385,833	\$1,047,332

Note: SCG continues to negotiate the final contract with the third party vendor. As a result of final contract negotiations, the budget allocation into the budget subcategories may vary.

3. Projected Program Gross Impacts Table

Table 2: Total Projected Program Savings by Subprogram

Program #	Main/Sub Program Name	2013-2014 Gross kW Savings	2013-2014 Gross kWh Savings	2013-2014 Gross Therm Savings
3766	3P-SaveGas	0	0	515,255
	TOTAL:	0	0	515,255

Note: The therm savings are estimated based on contract negotiations with the third party vendor. The projected savings may change as a result of final contract negotiations.

4. Program Description

a) Describe program

This program addresses gas savings in SoCalGas's service territory by implementing domestic hot water (DHW) control systems in hotels, motels, resorts and senior care facilities plus other associated hot water end uses. (e.g. on-site kitchen and laundry facilities). A typical equipment arrangement consists of a hot-water storage tank, a hot-water boiler which includes a circulation pump, a loop or network of piping to supply the heated domestic hot water to the facilities guest rooms / dwelling units, and a recirculation pump on the return line from the piping loop.

Almost every DHW system has deficiencies and system malfunctions which result in excess use of natural gas for water heating. Wasted energy from water heating can be as high as 119 therms per hotel room.

The controller will help identify existing system malfunctions as well as system malfunctions occurring during the life of the controller. The programmable setback feature has demonstrated to save additional therms per hotel room annually.

The Program will implement three process improvement components:

- Sensors and Data loggers The maximum thermostat set point of DHW systems in hotels and motels is usually set too high because of system inefficiencies and malfunctions. Such system inefficiencies and malfunctions are frequently identified only after the installation of a variety of sensors and a data logger. The data can be retrieved remotely or on-site. Once the inefficiencies and malfunctions are identified and corrected, the maximum thermostat set point can be reduced. The DHW system will still provide the minimum required hot water temperature to the rooms, but with significant energy savings.
- Set-Back DHW Thermostat Controller This energy savings measure is to install
 a programmable set-back temperature controller on the DHW system. A
 programmable set-back controller saves energy by lowering the DHW thermostat
 setting during times of low DHW usage. The controller can be programmed
 remotely or on-site.
- Continuous Commissioning® By using continuous commissioning of energy consumption and system parameters long-term energy savings will be maintained. Without continuous commissioning taking place, new system problems can continue for months without being detected and repaired. Continuous commissioning is an essential part of the long-term gas savings from DHW thermostat controllers.

Targeted market penetration levels will be achieved through specific elements:

- Increased customer awareness about existing energy use and practices;
- Increased understanding of technical options and financial impacts related to energy efficiency building improvement strategies, and
- Increased comprehensiveness of projects implemented due to the unbiased and vendor-neutral information on the best operating practices and equipment upgrades

The SaveGas Hot Water Control program is 100% complimentary to other programs. As far as delivery and implementation, all efforts are conducted directly by Program personnel without the use of subcontractors.

Customers will participate in a web-based interactive presentation which uses as an example technology on similar facilities to those installed (size and plumbing configuration). During this presentation the customers learn how they will be able to validate the ongoing savings and how to use the system as a management tool allowing proactive monitoring and verification.

Facility Pre-installation Analysis/Audit

After the customer provides a list of properties, technicians perform an onsite survey of the hot water systems looking for existing issues (e.g., system layout, applicability and proper installation and operation of the existing equipment). A general analysis of the property is completed including gas consumption history, and general building layout. The information is captured and logged online.

Proposal

Based on the pre-installation analysis, a proposal is generated for the property. The proposal states the minimum savings that will be achieved, the ongoing economic value, return on monthly investment, net savings, payback period, etc. The customer is informed that the Contractor equipment will be installed at no cost to the customer. However, the customer is then provided the option to enroll in the continuous monitoring service at a cost of \$1.00 per room. This service includes data analysis/tracking, consulting and control maintenance and updates; however, the customer is not required to purchase this service in order to install the controllers.

Installation of Equipment

After the contract has been authorized, installation of the equipment takes place. Installation includes the Contractor's DHW controllers, Contractor's computer(s) and Contractor's proprietary communication network. All of the equipment, installation and configuration settings are logged online. At this point in the process the controls are set up just to monitor and establish a baseline/benchmark of the customer's facility.

On-site training takes place in which the installation technician provides an overview of how the technology works, how to bypass the computer in case of an emergency and how to go online for systems analysis. Additionally property contact information is captured so that the system can notify the appropriate onsite personnel should a hot water issue be detected.

Commissioning the Contractor's Control Systems

Once a period of baseline operation has been established and recorded (approximately two weeks), the system is commissioned for operation. This entails switching the Contractors computers into control mode and adjusting delivery temperatures to provide optimal operation for the facilities equipment.

Contractor's administrative personnel conduct formal training for the property and management. During this training the SaveGas website is configured so that customers can go online and view their data, analyze their site and set themselves up to receive alerts for hot water issues.

Ongoing Savings, Monitoring and Verification

The controllers provide ongoing savings and the monitoring and verification tools track the overall system performance and savings looking for deviations that might interrupt or impede the savings or system efficiency.

Record Retention Procedures

Records include customer contract data, installation information, the data acquired during baseline/benchmarking periods as well as data acquired and system malfunctions identified and repaired over the life of the installation.

The Program's technology provides proven savings with constantly verifiable data that the technology is in place and operational. This capability is the latest trend in energy conservation, and having a third party utility program directly validates the technology and economics.

b) List measures

The Program will implement specialized technology that includes three process improvement components: Sensors/Data loggers, Set-Back DHW Thermostat Controller and Continuous Commissioning.

Measure	Incentives (per unit)
DHW - res	\$28.74
DHW - com	\$28.74
DHW - com laundry	\$1,500

c) List non-incentive customer services

The Program will also provide continuous commissioning service, customer education, data analysis/tracking, consulting and control maintenance and updates.

5. Program Rationale and Expected Outcome

a) Quantitative Baseline and Market Transformation Information

This section is not applicable.

b) Market Transformation Information

This section is not applicable.

c) **Program Design to Overcome Barriers**

Customers are often unaware that their water heater systems are malfunctioning. In addition, there is often customer resistance to install new technologies due to dissatisfaction with previously installed technologies that failed or resulted in operational issues.

This program will implement a hot water controller with a programmable setback feature to help identify existing and future system malfunctions and control gas consumption.

To overcome resistance to new technologies, the Program will not target individual property owners but rather will target those who own and manage portfolios of properties as "assets". In typical installations, the program will retrofit all of the hot water systems where the technology is applicable, corporate wide. This allows participants to manage the hot water systems, and thus achieve consistent savings within the entire portfolio of properties. This is accomplished from a central or remote location via an asset manager who is incented to grow asset value (savings).

In addition, Contractor will offer a continuous commissioning service which consists of automated monitoring and analysis of the DHW system performance at all time, along with prompt notification of system malfunctions to the owner/operator of the facilities. This will help encourage continuing awareness of system performance and help increase customer acceptance of the new technology.

Barrier	Solution
Lack of consumer information about energy efficiency benefits	Continue to educate target market on benefits of DHW technology for long- term energy savings
Lack of financing for energy efficiency improvements	Technology installation cost is incurred by program – no first cost for customer
Lack of a viable and competitive set of providers of energy efficiency services in the market	This specific technology is unique and as such EDC is the only provider. Continue to aggressively market the product to target market
OTHER BARRIERS	
	This program provides a comprehensive baseline test period that culminates in a thorough energy analysis. A report is provided to the
The models developed for assessing usage are often confusing to financiers & managers. Need	customer and explained in detail so the customer can understand the
to be expressed in plain English,	importance of the controller system

d) **Quantitative Program Targets**

Table 3

Program Name	Program Target by 2013	Program Target by 2014
SaveGas Hot Water Control with Continuous Commissioning # of Properties	10,000 rooms/ approximately 100 properties	10,000 rooms/ approximately 100 properties
SaveGas Hot Water Control with Continuous Commissioning # of Laundry / Kitchens	30	30

e) Advancing Strategic Plan goals and objectives

This Program supports the Strategic Plan in the following manner:

Description	Strategic Plan Sector	Strategic Plan Goal	Strategic Plan Strategy
Program is participating directly in the CEC-PIER program and technology is being utilized directly for establishing Title 20 and Title 24 guidelines.	Residential	Deliver Zero Net Energy New Homes By 2020.	1-1: Drive continual advances in technologies in the building envelope, including building materials and systems, construction methods, distributed generation, and building design.
On site training takes place in which the installation technician provides an overview of how the technology works, how to bypass the computer in case of an emergency and how to go online for systems analysis	Workforce Education & Strategy	Establish energy efficiency education and training at all levels of California's educational system.	1-3: Incorporate energy efficiency and demand side energy management into traditional contractor and technician training, such as for plumbers and electricians, and expand training resources to produce target numbers of trained workers.
Direct program involvement of the technology's manufacturer helps lead to increased development and utilization of energy- efficient products and services and implement activities that create favorable conditions for EE technology investment and development.	Research & Technology	Create demand pull and set the research agenda to pursue both incremental and game changing energy efficiency technology innovations.	1-2: Leverage private industry and Federally funded technology research and investment
Through program, Contractor works collaboratively with the R&D community and utilities to promote cost- effective performance enhancements.	Research & Technology	Conduct targeted emerging technologies R&D to support the Big, Bold Energy Efficiency Strategies/Programmatic Initiatives and integrated energy solutions goals.	2-2: Promote cost-effective near term performance enhancements of existing technologies
Through statewide collaborations and active participation in the CEC's PIER program, Contractor through this program expands activities that support Big Bold initiatives.	Research & Technology	Conduct targeted emerging technologies R&D to support the Big, Bold Energy Efficiency Strategies/Programmatic Initiatives and integrated energy solutions goals.	2-3: Develop initiatives aimed at PIER to support larger gains in support of Big Bold Initiatives.

6. Program Implementation

a) Statewide IOU Coordination

- i. Program name
- ii. Program delivery mechanisms
- iii. Incentive levels
- **iv.** Marketing and outreach plans, e.g. research, target audience, collateral, delivery mechanisms.
- v. IOU program interactions with CEC, ARB, Air Quality Management Districts, local government programs, other government programs as applicable
- vi. Similar IOU and POU programs

This third-party program only operates within SoCalGas's service area. The Program is designed to support and complement SoCalGas's core program activities. If this Program shares common elements with the IOU's core programs, other third-party programs, or programs in other IOU service areas, SoCalGas and the Contractor will strive to coordinate the similar activities.

b) Program delivery and coordination

- i. Emerging Technologies program
 This is not applicable to this program.
- **ii.** Codes and Standards program

 This is not applicable to this program.

iii. WE&T efforts

On-site training takes place in which the installation technician provides an overview of how the technology works, how to bypass the computer in case of an emergency and how to go online for systems analysis. Additionally property contact information is captured so that the system can notify the appropriate onsite personnel should a hot water issue be detected.

Contractor's administrative personnel conduct formal training for the property and management. During this training the SaveGas website is configured so that customers can go online and view their data, analyze their site and set themselves up to receive alerts for hot water issues.

- iv. Program-specific marketing and outreach efforts (provide budget)
- **v.** Non-energy activities of program This is not applicable to this program.
- vi. Non-IOU Programs

 This is not applicable to this program.

vii. CEC work on PIER

This is not applicable to this program.

- **viii.** CEC work on codes and standards
 This is not applicable to this program.
- ix. Non-utility market initiatives
 This is not applicable to this program.

c) **Best Practices**

The program design incorporates various best practice elements. Specific items include:

- Program Management Project Management: Program uses well-qualified engineering staff.
- Program Management Reporting and Tracking: Through detailed recording of installations and operating parameters, the program has a well-designed program tracking system to support the requirements of evaluators as well as program staff.
- Program Implementation Marketing and Outreach: The program sells the customer benefits first, then energy efficiency and keeps benefits quantifiable in economic terms.

Lessons learned is that customers are very open and eager to embrace programs that are supported and successful. Most of the installations done under the 2006-2008 program were exploratory in nature (to verify the technology). Now that things have been verified, customers are looking to expand the program.

d) Innovation

Control technologies are not new; however, the Program's user interface is new and innovative. Through the Program's technology, customers are kept 100% aware of the savings they are achieving and any energy waste that may be occurring as a result of hot water system issue, failures, etc. Through this interface, energy conservation is now elevated to become an integral part of daily operations as opposed to a concept or widget that is installed and forgotten.

e) Integrated/coordinated Demand Side Management

The savings data generated from the SaveGas Hot Water Control with Continuous Commissioning program is being directly used by CEC/PIER in a statewide study. Additionally the Program's contractor has been directly consulted as a result of the data, market penetration and experience in helping to craft title 21 and title 24 codes and standards.

When Contractor technicians perform an onsite survey of the hot water systems, they will often encounter additional energy savings opportunities beyond the scope of the Contractor DHW program. The opportunities will be noted and relayed to Contractor's primary contact within the customer organization.

f) <u>Integration across resource types (energy, water, air quality, etc):</u>

This program does not integrate across resource types.

g) Pilots

The Kitchen and Laundry components are pilot projects. The environment for Laundry and Kitchens is identical to that of other DHW applications and preliminary data is showing similar savings results.

h) EM&V

The utilities are proposing to work with the Energy Division to develop and submit a comprehensive EM&V Plan after the program implementation plans are filed. This will include process evaluations and other program-specific studies within the context of broader utility and Energy Division studies. More detailed plans for process evaluation and other program-specific evaluation efforts cannot be developed until after the final program design is approved by the CPUC and in many cases after program implementation has begun, since plans need to be based on identified program design and implementation issues.

7. Diagram of Program

No specific program diagram for this third party program has been developed. Any program linkages are discussed in Section 6.

8. Program Logic Model

Third party programs are an implementation channel and are included in the appropriate market segment logic models. No specific logic model for a particular third party program has been developed. However, provided below is a diagram of the Program's implementation.
